Goalserve NBA API Pricing and Features: A Complete Guide to Basketball Data Feeds

As the demand for real-time sports statistics grows across betting platforms, fantasy applications, media outlets, and analytics software, the need for reliable basketball data feeds has never been greater. The **Goalserve NBA API** is one of the market's leading solutions, providing developers and businesses with fast, accurate, and comprehensive basketball data.

This guide provides a full overview of the features, pricing, and coverage included in Goalserve's NBA and basketball data feeds.

What Is the Goalserve NBA API?

The Goalserve NBA Data Feed API delivers live and historical basketball information in both XML and JSON formats. Designed for fast integration into websites, mobile apps, fantasy sports platforms, and betting systems, the API offers access to an extensive range of data, including:

- Live NBA and NCAA scores
- Play-by-play updates
- Boxscores and player statistics
- Player profiles and injury reports
- Historical data dating back to 2010
- Player props and fantasy data
- Pre-match and in-play odds

This makes the NBA API suitable for products that require highly reliable, real-time updates and deep statistical details.

Global Basketball Coverage

The Goalserve basketball feed covers far more than the NBA. It includes major leagues, cups, and competitions across the globe. Coverage includes:

United States

- NBA
- NCAA

International Competitions

- EuroLeague
- EuroCup
- Spain ACB
- Italy Lega A
- France LNB
- Turkey Super Lig
- Brazil NBB
- Russia VTB League
- FIBA World Cup
- Olympics

This extensive coverage enables developers to build applications targeting worldwide basketball audiences.

Goalserve NBA API Pricing

Goalserve provides several pricing tiers based on the type of data required. Below is a structured summary of the available packages.

1. NBA / NCAA Live Data

Suitable for applications that require real-time game information, player stats, and fantasy data.
